NEWS IN BRIEF**ABS waives BCSL option**

ABS COMPUTERS has decided against exercising its option to buy the share capital of Business Computers (Systems), BCSL. The option, which expired on December 31, dates back to mid-1978 when the two companies linked up to buy John Bidsen, the ABS managing director, says: "The operation between ABS and BCSL will be maintained."

Xerox launch

XEROX is understood to be about to launch a touch-screen office information terminal designed for use by managers. By pressing squares on the screen, each of which can be given a different function by software, even someone with no keyboarding skill would be able to use the unit, reducing reliance on secretarial support.

Network lead

UK UNIVERSITIES have taken a world lead in communications between different types of computer, according to the John Network Team. In a report on its activities from April 1979 (when it started) to last August, the JNT, which advises the Department of Education, and Science's Computer Board and the five research councils on data communications, gives a firm recommendation to the Yellow-Book transport service over its rival ECMA proposal, which it says is less conducive to open systems interconnection.

Scottish venture

A JOINT venture has been set up between the Watson-Micromechanics, Logistics and Computer Applications Services in Scotland, to concentrate on marketing microtechnology and microelectronics applications to commerce and industry.

Copyright claim by ACT Microsoft

AS a major software copyright case brews up in the UK over the copying of the Visicard program sold by ACT Microsoft, President Carter has signed the controversial US software copyright Bill that enables a user to copy a proprietary program under certain circumstances (CW, July 3, 1980).

ACT Microsoft is seeking an injunction later this month to prevent a private individual, David Bolton, from selling a floppy disk-based product called Visicard Backup which enables one copy to be made of the business planning package if the host is an Apple II microcomputer.

ACT Microsoft trod carefully at first because Bolton appeared only to be selling Visicard Backup directly to end users through magazines like Practical Computing.

The Visicard Backup diskette holds a code for cracking the Visicard protection mechanism.

After Visicard has been loaded into the memory, the Backup diskette

is re-loaded and Visicard dumped onto it. A protection mechanism is created making subsequent copies impossible to make, in theory, but ACT Microsoft boss David Rowe claims that one of his programmers has almost broken the code.

The US copyright act enables a user to program provided that it is "an essential step in the utilisation of the machine" and that the new copy is "for archival purposes only." In this way regular archival copies can be taken to guard against computer fraud.

Another significant aspect of the Bill is that copyright applications for software must disclose the first and last 25 pages of source code, a requirement which has raised fears that too much of many programs will have to be made public.

On January 21

US curbs military software exports

EXPORTERS of software from the US are faced with a formidable set of new regulations which have been rushed into effect to prevent Third World and Communist bloc countries getting hold of programs which could be adapted for military use.

The clamp-down comes after the US Department of Defence became anxious that vague controls on software export constituted a security risk.

The stringent new rules, introduced by the Commerce Department's Office of Export Administration, are aimed at clearing up ambiguities in export control.

The new regulations define a tight framework, even for software exports to the Free World. "The idea is to get a handle on the software industry without the 'wolf of controlling security.'

Exporters of hardware will have to itemise software to be used in the system, described in detail where the equipment is bound for Communist countries.

It is not yet clear whether the regulations will have an adverse effect on the US software export trade. "That will all depend on how the law is administered, and those affected have plenty of time to comment," said Andrews.

Union threat to PAYE system

COMPUTERISING the Inland Revenue's Pay As You Earn scheme (PAYE) could be blocked as a result of the unions' reaction to the government's 6% pay policy for public sector workers and demands for big manpower cuts.

The £150 million system is due to be installed between 1983 and 1988. West Midland tax offices being the first to go live and will be based on an ICL 2900 kit. The blocking would not minimise the ability to adjust taxation levels before full computerisation.

The department's main union, the 65,000-strong Inland Revenue Staff Federation, favours computerisation provided there are no job losses.

But a government decision to ignore findings of the independent Pay Research Unit on the 6% limit has angered the federation.

Federation general secretary Tony Christopher said: "We need a computer system and its members are prepared to do whatever is necessary to achieve that. But the members of the present government had changed this."

The revised ICL system was ordered because of a government "no British" decision. Revenue and government in-house computer experts had cast doubts on ICL's ability to meet the requirements of a more ambitious scheme and had favoured the IBM 3033. Christopher said: "We obtained IBM from the beginning."

An 18-month delay will occur between computerising the West Midlands pilot scheme in 1983 and 1988, introducing the system throughout the UK.

"We will be meeting with other Civil Service unions to try to find

2900 series a proven technical success

YOUR recent story about the computing service at Oxford University will have left many readers believing that you were criticising the capabilities of the ICL 2900. May I provide a contrasting picture to help readers to form a balanced view of the large ICL machines?

At SWURCC we run a 2980 attached to the South West Universities Computer Network. This machine provides half of the total batch computer power used by five universities, provides a local interactive service to SWURCC staff, and handles considerable communications traffic. This week we have extended an interactive service to computer centre staff at each of the five universities. The 2980 helps us to provide a stable, usable and efficient service to our several hundred users.

It may be suggested that, while the 2980 is an excellent batch engine, it is less successful in providing interactive computing. Here again experience suggests the opposite. Queen Mary College in London runs a 2980 providing a linked interactive and batch system. ICL is committed to demonstrating during 1981 that this system can support 150 active terminals (on a configuration significantly smaller than the Oxford University system). I understand that this benchmark has already been passed, unofficially, on the QMC machine, and just awaits to be demonstrated officially.

Outside the universities, the United Kingdom Atomic Energy Authority machine at Risley is providing an excellent interactive service to a large user population. These are three good examples where I have recently spoken to computer centre (dean) staff.

Providing a general interactive service to a large user population can be difficult and expensive, as all mainframe manufacturers have discovered. There are dozens of reasons why the service provided by a particular institution may be temporarily disappointing, even in an unfortunate few cases.

As a result of the generosity of a local company, Gillott's School, Hemel-on-Thames, has two Olivetti 1000 teleprinters. Unfortunately the company was unable to give us any manuals for these machines and Olivetti is unable to help us as the machines are now obsolete.

May I ask if any of your readers has a set of manuals which they no longer require?

A. W. BAILSON
Gillott's School,
Hemel-on-Thames.

1984 and all that

1984 will be another of the strange things people say in the media about computers. As seen in a TV advertisement for South Nottingham, London, who do the most dramatic, silicon Valley, computer sales, it could well be true. IBM one of the three major computer manufacturers is going through rather turbulent times.

ISSN 0010-4761

COMPUTERVIEW

Man for the job

placed by Norman Tebbit, from the Department of Trade.

Baker's time will certainly not be devoted exclusively to computers: his brief will include the whole of the private sector of British industry. The significance of his appointment for us is that it indicates, in Baker's words, "the Prime Minister's personal interest in and commitment to" this industry, which she believes is one of the UK's "greatest growth areas, one which will create a great deal of wealth". Baker adds: "This is very much her initiative."

The other important side to Baker is that he is an interventionist, believing that government support is essential for the UK to stand up against overseas competition. There are many in our industry who would prefer to see such intervention cut in the open rather than have it hidden under, for instance, supposedly open tendering policies through which locally owned firms end up with the contracts anyway. Norman Tebbit is a hard-line monetarist, but he will be backed by Baker's distinctly left-wing (for a Tory) views.

Baker seems to have impressed Mrs Thatcher despite his earlier associations with Mr Heath; and, in some ways more importantly, he has succeeded in getting Sir

Keith Joseph to listen to him. That in itself is no bad thing; Joseph certainly needs to listen to someone. Baker's main problem now is that he has to implement all the things he has been campaigning so vigorously for all these years: a long-term policy, a computer in every school, awareness in Whitehall.

Fortunately, there are few people better able to do it.

Talked down

LAST week the publication of ICL's report and accounts caused yet another dive in the share price. The company, investors are saying, is really on the floor.

But there is more than a little evidence that the City — whose opinion manifests itself in the Stock Exchange quotation — is up to a particularly clever manoeuvre, which is to "talk down" the share price. It then becomes cheap, and eventually very profitable, for the institutional investors to get into the shares.

Perhaps it is not all ICL's fault. The zen or big 2900s sitting around in houses because the government decided to extend the life of its ageing 1900s cannot be blamed entirely. SAMES will bring the country closer to its goal of an independent electronics industry, unhampered by sanctions.

But the City has gone well over the

little more noise from the ICL wing in successes like the ME29 and the advanced software sales (not just development needed).

Siemens backs IC plant in S Africa

Paul Basson, managing director of Computer Modelling Ltd. . . . "Best in price/performance terms."

INTEGRATED circuits are to be "home produced" in South Africa after the formation of a new company, South African Micro Electronic Systems. It was set up by the SA Industrial Development Council and Siemens SA, which owns 49%, to further the country's local electronics industry (CW, December 4, 1980).

Similarly, it is impossible to believe the ill-conceived attempt to attract Shell as investors was not undertaken by someone at ICL knowing it had no company millions in market capitalisation to offer to that error.

It is also unclear how likely are the

pects of write-offs because of the slow

rental and the rise in leasing of the

company's equipment. The City's own merchant banker Philip Chappell, back

little to assure fears.

Perhaps it is not all ICL's fault. The

zen or big 2900s sitting around in houses

because the government decided to ex-

tend the life of its ageing 1900s cannot

be blamed entirely. SAMES will bring

the country closer to its goal of an

independent electronics industry, unhampered by sanctions.

Since the plant and equipment were ordered well before recent price rises, South Africans have got themselves a bargain, but the plant will bring an end to the days of local telephone calls — a present still on the mechanical system — which can last all day for a connection charge of less than 3p.

economy and, ironically, sanctions.

Production facilities have been de-

signed to be flexible, since the

South African market is compara-

tively small, but needs a wide

range of products. Custom business

will form an important part of the

company's output of LSI chips.

Although the move was

promised by the South African

Post Office is

at present undertaking a massive

upgrading program, altering its old

and overloaded telephone system

to electronic digital switching.

This move has boosted an industry

which was already preparing for a

boom, encouraged by a thriving

many, and probably other sources in

Europe. Manufacture should

start later this year.

Production of LSI wafers will

dominate, both plastic and ceramic

encapsulated. There will also be a

sophisticated test service to moni-

tor the quality and reliability of

components.

Production for the commercial

market should start later this year.

Recently the SA Industrial De-

velopment Council's chairman,

Arie Van der Berg, warned the

world that "the local electronics

industry is further along the road

to self-sufficiency than most

people realise" (CW, December 4, 1980).

SAMES will certainly bring

the country closer to its goal of an

independent electronics industry, unhampered by sanctions.

COMPUTER Modelling Ltd, one

of over 100 UK Data General

OEMs, has brought out a financial

planning system for £16,000.

Based on DG's MicroNova pro-

cessor, the software is pitched at

management in industry and com-

merce.

DG's managing director Paul

Basson claims to have spent nine

months benchmarking hardware

from manufacturers including

Computer Automation, Digico

and DEC.

First UK customer for add-in memory

THE Stock Exchange has become the first UK customer for non-IBM add-in memory for its IBM 3033.

Add-in memory differs from add-on memory in that it occupies the same slots in the machine as the IBM-supplied memory boards and requires no external power supplies, cables or boxes.

The Stock Exchange's two-megabyte memory expansion, costing £24,000, was made by Camtek in the US and supplied by PCML of Cobham, Surrey.

Based on 16K, 32K or 64K-hertz dynamic RAM chips, the memory boards are transferable between computer models from 370/158 to 3033 and on many they allow double the memory capacity to be configured.

Telecom order

BRITISH Telecom has announced that 300 System X telephone sets will be installed in Coventry's public call boxes over the next two years.

An IBM display for non-IBM computers.

IBM have just produced a new VDU that will connect to most computers. Because it's ASCII Tele-

type compatible.

The first thing you'll note about it is the startlingly crisp definition of its screen.

It should also please everyone using the VDU, because the screen tilts and swivels for comfortable viewing.

There are dished keys for fast touch-typing, in fact the excellence of the whole keyboard design is a direct result of IBM's type-writer skills.

The IBM 3101 is now available through distributors. Ask us for details.

Buy it in quantity and you may pay even less.

New skills in engineering

WITH the media-dominated by factory closures and the "microchip" seen as an even greater threat to employment than Tory economic policies, a conference on how computers will create new skill opportunities in the engineering industry could be a welcome relief.

Jim Dick of the Engineering Industry Training Board will examine how national training and educational systems should respond to rapidly changing technological needs.

Venue for the meeting is the Bowater Conference Centre near Knightsbridge Tube Station. It starts at 2.00 pm, and doors open at 1.30 pm. The entrance charge on the door is £2.

More details about the meeting are available from Malcolm Petru on 01-995 1546.

Lined speakers include Peter

Senker and Erik Arnold of Sussex University's Science Policy Research Unit who will discuss their research into the impact of new technology on skills in mechanical and electrical engineering activities.

Jim Dick of the Engineering Industry Training Board will examine how national training and educational systems should respond to rapidly changing technological needs.

Copies of communication interfaces, British standard, BS 4368, Modular design for design of interface cards, screen and switches and data for user comfort, Screen interface filter.

With 250 lines for operator instructions. Available in 80 ASCII or 16K equivalent. Communicated serially to computer with a wide variety of processor. May be advanced by software that can adjust productivity.

Getting micro message home - with no strings

THE gentleman in my picture is not fiddling with one of the props from "The Empire Strikes Back". This is a design for an electronic stringless guitar that is on show at the Design Centre in Haymarket as part of the new Microelectronics Come Home exhibition.

The instrument, called a Syntar, was designed by Mark Morrison of North Staffordshire Polytechnic, several of whose colleagues have also indulged in this touching practice of building mock-ups of wondrous electronic machines before they have discovered how to make them work, a hub. I call writing out the postcards you're going to send back from Betelgeuse. There was even a cardboard robot vacuum cleaner that would (they hope) have a magical device to stop it from running over the cat.

This prototype guitar without strings is a Syntar, designed by Mark Morrison of North Staffordshire Polytechnic. It is on show at the Microelectronics Come Home exhibition.

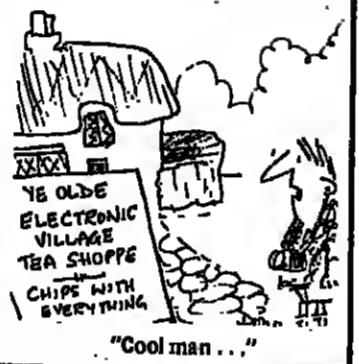

One of the great ideas men of our age

IT was sad to hear of the death of Marshall McLuhan, one of the most interesting of our age's ideas men. He is best known now for his appearance in Annie Hall, when Woody Allen leads him on to the screen to deflate a pseud in a cinema queue who has been dropping his name.

In the Sixties when he first rose to fame he was chiefly noted for the obscurity of his ideas, the butt of many a cartoon in the New Yorker magazine along the lines of "I'm terribly proud of

my son - he understands Marshall McLuhan". Long before our present preoccupation with technical change McLuhan was proclaiming that the world would be transformed by electronics. Unlike many pundits today, he actually analysed this thesis, and came up with reasons why differences in moulds should have so much effect.

It is by no means certain that he was right, but at least his analyses were stimulating.

"Cool man..."

GILB'S MYTHODOLOGY

Motivation by competition

ONE of the fundamental reasons for over-complex designs today is lack of real competition for the designer.

Our designers are not encouraged to stretch their imagination and to increase their professional competence. Why should they? Their design suggestions will be accepted, and will function reasonably well. At least it will take years of both project implementation and operation before critical weaknesses are discovered.

We have a lot to learn from the building architecture competition model. So why don't we put all our important design projects out to open competition from the many consultants and computer service and hardware suppliers?

If they are as good as they claim to be, designers should have no objection to presenting their best total design solutions at their own cost, and being judged and presented (if they win one of the major prizes) in public.

First prize winners will be awarded contracts for the detailed architecture and the follow-up of the building operation. Second, third and other top places will get cash awards, and we will make use of some of their best ideas.

The competition principle and the simplification goal can be applied to any one or more of the mathematicalities; for example, we can ask to simplify the uncertain elements of cost, time of performance, etc.

We can ask for a reduction in the number of new and untested components, or of unreliable components (such as software packages). In the top-prize category, a design with other distinctive merits can be awarded.

It is essential, when asking for such competitive design definitions, that we state only the really critical design goals and that we do

Tom Gilb is an independent consultant, lecturer and author on computing topics.

not constrain the designers to any particular architecture.

In one recent large-scale architecture simplification exercise, I was faced with the implicit assumption that the solution had to be in terms of the present large-scale computer system and its database management software.

The final architectural solutions were total simplifications and attacked the ultimate goal, rather directly.

The new system architecture consciously avoided the large-scale systems in favour of smaller hardware increments. It bypassed "database" in favour of concentrating on the area of greatest employee impact (data entry).

It is clear where all this technology will leave the DPM. Certainly, a lot of education and training will be needed in the not-distant future.

Information technology will not be able to escape the communications link, whether private or public networks are used.

Nor will the DPM escape contact with such theory areas as cross-border data flows, electronic fund transfer and the ubiquitous office telex machine.

Any one - and increasingly that looks like being all of us in computing - getting involved in datacom will first have to learn the language X.

Perhaps some of the more timid will consider trying out the idea of at least arranging an in-house competition, just to get the feel of it.

Insecure

I can promise you the results in advance, if you are trying halfway.

Some of the designs (which you would not have known about) will be at least twice as good, measured at least one interesting attribute, as the original. Some designs will be an order of magnitude better than your original idea.

The company shall retain the rights to use all ideas submitted in combination.

We shall retain the right to share all submitted designs in trade displays or in consultation with your leading consultants, we want to employ.

Gilb's hypothesis: If you make use of design architecture competition, you will improve your results more than by any other form of optimisation of simplification. If you don't use competition, you will never know you are missing it.

The best design shall be personally

organisational and economically

FOCUS

Language of communication

RELIABLE forecasts suggest that communications could be the theme of 1981. Getting it together in datacom terms involves interfacing. Prestel with Ethernet, Euronet with the Cambridge Ring and most probably the DPM with the latest Plessey Glossary of Telecommunications.

Independent of any competitors, the first prize-winner shall be offered the opportunity to rework the final architecture according to revised company directives and in the light of other ideas from other competitors.

I don't think many readers have the moral or professional courage to throw their architectures into open competitions like this and I can hear the long list of reasons why not, even as I type these words.

Perhaps some of the more timid will consider trying out the idea of at least arranging an in-house competition, just to get the feel of it.

Insecure

I can promise you the results in advance, if you are trying halfway.

Some of the designs (which you would not have known about) will be at least twice as good, measured at least one interesting attribute, as the original. Some designs will be an order of magnitude better than your original idea.

NEWS IN BRIEF

Univac ousts ICL at Rediffusion

A UNIVAC 1100/61 is replacing two ICL machines, a 1903A and 1901T, at the Rediffusion Group. The 1100/61 will handle all data processing for the TV rental unit with program conversion carried out at Univac's Paddington, London, conversion centre.

A subscribers' account system will be written jointly by Univac and Rediffusion for 1100/61.

The X factor

LINEx transmission and multiplex equipment worth \$11 million has been ordered by British Telecom from GEC Telecommunications for delivery during 1981. The equipment will be made in Coventry and includes both analogue and digital systems.

Satellite galaxy

APPROVAL has been given by the US Federal Communications Commission for the construction of 25 and the launch of 20 domestic communications satellites. Three newcomers, Saurier Pacific, Hughes and GTE Satcom were included in the award, although overall established operators with proven traffic demand were favoured. These included RCA, Western Union, Comsat General, SBS, AT&T, ITT.

Video briefings

DELTAK, publisher of video-based training and informed programs, has set up a service providing video briefings for managers and executives who are looking to devise new strategies to cope with the explosion of information in today's business environment.

Technology forum

A NATIONAL forum to chart the industry's approach to technology is being advocated by Dr Alan Bamford of Durham University business school in its Industry Relations Journal. The forum would consist of government, industry and trade unions, and would be funded jointly by three sides.

CTL division

THE all-British computer company CTL has established an independent Systems Division which will be responsible for the design, hardware and systems software and the development of applications software for CTL computers. The new division is headed by Bill Gowles, formerly of Software Sciences.

Information technology will not be able to escape the communications link, whether private or public networks are used.

Nor will the DPM escape contact with such theory areas as cross-border data flows, electronic fund transfer and the ubiquitous office telex machine.

Any one - and increasingly that looks like being all of us in computing - getting involved in datacom will first have to learn the language X.

Insecure

organisational and economically

Planning a night to remember are (standing): Rupert Bayfield and David Bannell (seated): John Brown and Iain Holden. Bayfield joined De La Rue Bull from ICL in 1981 as an operator and progressed to become manager of Honeywell's Software Services Department. He is co-founder of the VLI group. Bannell, as personnel officer with De La Rue Bull 1981-85, was instrumental in recruiting the key new staff of that period, and is now London regional manager of MBL, an executive selection consultancy. Brown started at De La Rue Bull in 1981 as a programmer, leaving in 1987 to join ICL, where he is now employed in a senior role. Holden was assistant manager of the Technical Services Department of De La Rue Bull in the early 1980s, and is now European database manager for Honeywell Controls.

Twenty years on — Swanning with the De La Rue Bullians

THE four men in the top-of-page picture have been plotting to make Friday, January 30, a night to remember. And if you worked for De La Rue Bull and have not yet been lured into their nostalgia net, you should turn up at The Swan, off Southampton Row in London, where you will find what has happened to the old gang, 20 years on.

The date commemorates the 20 years since two of this particular Gang of Four joined De La Rue Bull as trainee programmers. About ten years ago, Iain Holden and John Brown decided they would like to celebrate the anniversary of their initiation at the same pub they frequented in the De La Rue Bull heydays.

De La Rue Bull became part of successively larger groups, but the close company spirit remained intact. In 1984 the company became a part of the US GE group under the name GRIS and in 1970 GE and Honeywell merged their computing interests.

The story of De La Rue Bull goes back further than the Holden/Brown anniversary. It was in July 1959 that the first five staff were sent to Paris for a training course.

A host of computing luminaries emerged from De La Rue Bull and are now working in senior positions in many companies. Of the Gang of Four, Bannell is a senior executive with MSL management consultants, Bayfield is managing director of the VLI group of computer services companies, Holden is European database manager for Honeywell Controls, and Brown has a senior position with ICL in Bracknell.

The first five who joined De La Rue Bull in 1959 have all moved on: Brian Higgins to Calcomp, Malcolm Water to PA, Ron Cook with GEISCO, Derek Price with Comshare in Canada and Graham Thorne, still with the family, with Honeywell.

One of the highest climbers has been Ian McNaught-Davis, managing director of Comshare (and a vice-president of International Business Machines Corporation), who has been on the up since 1964. Comshare, now part of the ICL group, has been a major player in the development of low-cost, high-speed, multi-user computer systems, and its main products include the Gamma 30, which was developed by ICL, and the RGA 301, which was marketed by ICL as the 1600 series.

Double demand for non-impact printers predicted for 1985

WORLDWIDE demand for non-impact printers will more than double between now and 1985 by which time international shipments will be worth \$2,700 million.

Over the same period, shipments in the US of printers costing \$1,000 or less will jump from just over \$100 million to more than \$300 million.

These predictions feature in reports* from two US consultancies, Strategic Business Services and Creative Strategies International. The two firms are unrelated, though they are very near neighbours in San Jose, California.

SBS' study on non-impact printers analyses the future of seven technologies — electrophotographic, thermal, ink jet, dielectric

and plain paper electrostatic, electroresistive discharge, electro-lytic and magnetic.

The electrophotographic emulsion high performance/high cost laser printers of the type manufactured by IBM, Siemens and Xerox SBS predicts that prices of these units will tumble to as little as \$2500 and that annual sales will jump from 160 units in 1979 to 16,000 in 1985.

Thermal printer shipments will grow at a rate of 8% a year to a level of \$500 million by 1985.

Main application areas will be personal and small business computers.

The Creative Strategies report

on low-cost printers covers both

non-impact and impact units that

print at least 40 columns and cost

\$1,000 or less.

US shipments by value of non-

impact printers, all employing

matrix technology, will grow at

15.5% a year compound between

now and 1985 by which time they

will stand at \$38 million. In

contrast, impact units will expe-

rience a 25% growth rate to reach

a level of \$264 million by 1985.

About \$200 million of that total

will represent dot matrix printers

in the 80-120 cps speed range.

More than 300,000 of these units

will be shipped in four years' time.

*Non-Impact Markets and Technol-

ogies for distributed Printing, 120pp.

Strategic Business Services Inc,

4320 Stevens Creek Blvd, Suite 215,

Arthur Carr (right), president of Codex, discusses the deal with Paul Rosebaum, vice-president.

Codex buys its UK distributor for £1million

by Donald Kennett

GROWING investment needs at Croydon-based Cole Electronics and patching and test equipment from Dynatech, Digilog, International Data Sciences and Bradley Telecommunications in the US.

Code Products Division sales grew an average 37% a year to £3 million between 1977 and 1979, the last year for which figures are available, while profits reached £405,000. Codex grew at over 40% a year in the same period, following several years' growth at 60% a year, but its actual sales and profit figures are not available because they are merged with Motorola's.

Codex products already account for 90% of the company's sales, but some component sub-assemblies and transceiving equipment will continue to come from the

remaining part of Cole Electronics and patching and test equipment from Dynatech, Digilog, International Data Sciences and Bradley Telecommunications in the US.

Managing director Rodney Turvey and commercial director Derek Surry remain with Codex UK.

Codex products already account for 90% of the company's sales, but some component sub-assemblies and transceiving equipment will continue to come from the

Centre-file into second stage of real time share project

CENTRE-FILE, the specialised bureau subsidiary of Northwest Banc has implemented nearly one-third to the project, which is estimated to need over 600,000 lines of coding to complete.

Centre-file, which recently lost the last of its sales force, has indicated that it is happy to retain its existing customer base until

the system is fully converted.

But informed commentators see a loss of interest by Northwest Banc in this segment of the market which, though highly lucrative, is savagely competitive.

Centre-file operates two big IBM machines, a 3031 and a 3032, currently under Total and VSAM to service about 50% of the broking market. The current

project is aimed at retaining the IBM machines but switching the software to a DB/BC root-only version of IMS.

The conversion timescale straddles the period in which the first of the VLSI-based processors on a chip will be delivered.

Centre-file backs NMW — see page 9.

The new multiplexers you've been waiting for.

OMNIMUX—from Racal-Milgo.

Racal-Milgo has designed, developed and built a completely new advanced range of statistical multiplexers.

We've named it OMNIMUX—because it does all you could want from a statistical multiplexer. And it comes in three versions: for up to 8, 16 or 32-channel operation.

OMNIMUX incorporates a host of advanced features, including:

- Commonality of PCBs between models giving lower-cost maintenance and cost-effective system expansion.
- Integrated network management capability—permitting use with Racal-Milgo's family of Network Diagnostic Controllers.
- Echoplex, providing complete end-to-end error control.
- Comprehensive diagnostics, with all controls and displays on the front panel.
- Simultaneous operation of all input channels at up to 9600 bits/s—giving maximum input data rate of 307.2 kbps.
- Statistically mixed asynchronous and synchronous channels.
- Error protection (ARQ) to CCITT X.25 level 2 protocol.
- Supervisory port for monitoring, high level network control, diagnostic and statistics reporting.

OMNIMUX Statistical multiplexing. Racal-Milgo

To: Racal-Milgo Limited,
Portman House,
12 Portman Road,
Reading, Berks,
England.
Please send me full details
of the OMNIMUX range.

Service for buyers holds information on 15 million products

AN online information retrieval service for buyers in industry has been set up in London with financial backing from the Department of Industry. The File of Industrial Data (FIND) is claimed already to contain information on 15,000,000 products and components of interest to manufacturers, and uses a software package that has been designed for the purpose, from scratch.

FIND is intended mainly for telephone enquirers, buyers in industrial firms who need help in finding products. No consumer products are included.

Teams of operators answer the phone and obtain the needed information from a VDU linked to a dedicated CMC Reality system.

Users who want to access the data directly with their own dial-up terminals can do so.

Enquirers pay nothing for the information, but their names and addresses are passed on to the firms supplying the data, who pay a basic charge of £730 a year for which they can load 250 of their products into the index. Extra products are charged at between £1 and £2 each.

The Reality, which currently has 100 megabytes of disc, was chosen for its operating system,

particularly suited for data work. The retrieval package is designed and implemented entirely by managing director Roger Gaby and his staff, using Basic.

According to Gaby, 250 companies are already supplied due to FIND, which has been running on a trial basis since October. These firms include GEC, and Kienzle, many are present getting a free trial.

New idea in DP insurance

NOVEL insurance cover against the devastating effects of fire, flood and explosion on a company's data processing centre has been made available through a new company, Recovery Operation Centres.

ROC will erect a temporary computer centre at any company hit by disaster for premium ranging from £2,000 a day.

Recoveries would normally be

achieved within 24 hours.

For more information contact:

Recovery Operation Centres, 100 High Street, Petersfield, Hants, Tel: (0257) 42711.

OLIVETTI BUSINESS LAUNCH

ADDING to its Business Computer Systems range, Olivetti has introduced the BCS 2000 Video series, the first two members being the BCS 2030 VF and the B258, which is shown here. Both models come with a full sized VDU and two megabytes of storage capacity on double density floppy disc drives.

The B258 is equipped with a 13-inch carriage and a 60 cps printer while the 2030 VF comes with an 18-inch carriage and a bi-directional printer that runs at 100 cps.

The BCS 2000 will complement other than replace the existing BCS 2000 family and will run Olivetti's Opol range of applications packages.

French PO and travel agents to devise joint DP system

FRANCE'S national syndicate of travel agents, SNAV, has joined forces with the French Post Office's telecommunications department to devise a data processing system for its members.

Foreign countries will be asked to co-operate in defining a system compatible with those being introduced abroad.

Jean-Marie Stracuzzi, the SNAV official responsible for the project, says it will increase tour operators' sales of holiday packages, speed and boost bookings, reduce administrative work and provide detailed statistics required for sales strategy.

SNAV had earlier shown in-

terest in a system devised by Servitel and known as STT, or insurance data processing service. But the travel agents' computer working group ruled against STT, on the grounds that it was already obsolete.

The French travel agents hope a new system will be operative within two years. Meanwhile they are asking Air France and French railways for more terminals in order to handle travel bookings.

SNAV has also asked Industry Minister Andre Giraud to set up a databank of travel information which will give members immediate access to material now available only by lengthy consultation of brochures and timetables.

The mini's rated speed is 500,000 operations a second as measured by a standard instruction mix, and a basic system without a disc or tape drive costs about 200,000 yuan. This is equivalent to about \$130,000—an extremely high price to the Chinese end users. But the Chinese computer manufacturers expect that with the introduction of higher levels of integration and improvements of manufacturing technology the prices of their computers will continue to decline.

According to the Chinese technicians, who accompanied the exhibit, the DJS-131 mini is already an eight-year-old design but it is still in production because the Chinese maintain 10-year hardware manufacturing cycles.

Nevertheless the DJS-131 series is being phased out and is expected to be replaced by some of the DJS-200 series of computers that are comparable to the IBM 360 machines.

The Shanghai Electronic Computer Factory which produces the DJS-131 also manufactures the DJS-131 series is being phased out and is expected to be replaced by some of the DJS-200 series of computers that are comparable to the IBM 360 machines.

The mini's rated speed is 500,000 operations a second as measured by a standard instruction mix, and a basic system without a disc or tape drive costs about 200,000 yuan. MICRO NEWS**Stay-home banking in Tennessee**

HOME banking has become a reality in the US. Customers of the United American Bank in Knoxville, Tennessee, can use a Tandy TRS-80 colour computer for \$15 to \$25 a month to utilise services at their local bank.

The Express Information home banking service is a joint venture of the United American Service Corp, Tandy and CompuServe. About 400 customers have had the facility since October last year but the program will be expanded throughout 1981.

Express Information includes a standard keyboard and simply plugs into the customer's television set and telephone.

Among the facilities available are a news and financial advisory service, payment of bills, access to current information on the customer's account, a bookkeeping service and a loan application service.

Tandy's colour computer, which is being used by the United American Bank in Tennessee for a home banking scheme.

Movement on the 256KdRAM front

IT was a stunning enough announcement in February last year, that NEC-Toshiba and NTT had introduced experimental wafer versions of the 256K dynamic RAM. Struggles were still going on with the development of a working 64K dynamic RAM.

Now Toshiba seems to have won the 256K race with the almost unbelievable news that it expects to be in volume production with the device just two years later, in February 1982.

Warning

It was announced at the 1980 International Solid State Circuit Conference held in San Francisco, and at the same event Fred Bucy, president of Texas Instruments, warned that Japan might take the lead in microelectronics from the US during the 80s (CW, February 29, 1980). Both NEC-Toshiba Information Systems and NTT's

Mitsubishi Electrical Communication Laboratory are wholly Japanese companies.

Even though Japan has won the race, the 256K market, small as it may be at the moment, is not completely Japanese. Apart from the three companies mentioned, one other has just announced its plans and developments in the area: Siemens of Germany. In the US, Motorola hopes to sample a 256K device using HAMOS II in 1982, with production two years later (CW, July 10, 1980).

The question of need and demand for 256K RAMs in the systems industry must be considered. This same industry does not seem to be falling head-over-heels for the 64K RAM, which has become available over the last year from various semiconductor manufacturers.

Preference is still given to the 16K dynamic RAM, of which the standard is the Mostek part, because of cost, availability, standardisation and incentive: The 64K RAM is available in small quantities only for \$60-90 apiece, whereas the 16K costs \$2-3 a piece.

Redundancy

Several industry sources claim that Motorola is the winner of the 64K dRAM race, although Texas Instruments was one of the first companies to announce its development, two years prior to availability. Others in the market include National Semiconductor, Fairchild, Mostek, ITT, Siemens, the Japanese companies, those already mentioned, Hitachi and Fujitsu, and of course, Intel.

Intel's was the latest to be announced and its design involves redundancy which improves the weak point of 64K RAM production yield. Until now, bad yield has limited the availability of the 64K device, which explains the lack of incentive of systems companies to design with 64Ks rather than 16Ks.

Electronics industry analyst Ben Rosen believes that Intel will set a trend in the industry with its use of redundancy, and feels that its chip may perhaps become a standard (although that is what Immos director Paul Schroeder is hoping will happen with Immos' 64K dynamic RAM which is expected on the market in June).

Siemens, a company that is working closely with Intel in its latest Microsystems 80 project developing a 32-bit chip set microprocessor, has employed protective steps against alpha particle problems have been taken in the design of the Japanese devices. Alpha particles proved a hazard in the production of the 64K dynamic RAM because of the high densities.

One protective feature is the memory cell capacitance is large enough for the soft errors caused by one particle. Also, critical areas of digit lines are as small as possible and a coating is applied to the surface of the chip.

The NEC-Toshiba chip does not use redundancy because NBC has claimed it to be unnecessary. This could cause the two companies to lose the lead, if they do not get good yields.

32-bit sample this quarter

THE firm 32-bit microprocessor, Intel's iAPX 432, looks like appearing on the commercial market sometime this year. Initial samples are expected this quarter (CW, June 19, 1980).

The 432 will be a three-chip set consisting of an instruction decode unit, 43201; an execution unit, 43202; and an I/O interface unit. Its power is rated by Intel at 2 mips (million of instructions per second), equivalent to the power of an IBM 370 system.

The incorporation of the kernel of an operating system on the device itself means that each chip set can recognise the instructions intended for it and execute them, thus speeding up operation.

Memory management capability includes the mapping of a virtual memory space of 2³² bytes into a physical memory space of 2²⁴ bytes. Intel claims that 32-bit additions and multiplications can be done in 0.4 and five microseconds respectively.

Please note applications for tickets cannot be accepted after February 23, although tickets will be available at the door price £1. Cheques should be made payable to IPC Business Services Limited.

by Eileen Stainer

COMPANY NEWS**CCF doubles turnover with brokers' package**

dundancy in the design of its 256K RAM in an exciting way.

The redundant bits are accessible to the designer to enable him to improve his design methods and to the user to improve circuit performance. The main disadvantage of the chip, as confirmed by Siemens, is its high power consumption.

Exciting

According to Siemens, both NEC-Toshiba and NTT have produced 256K chips which appear to be more like multiple 64K RAMs. Unlike Siemens' device, however, they do offer options for output improvement.

Siemens' chip has another exciting feature. Starting from one special pin on the 18-pin package, it is possible to have a standard 16-pin configuration. One pin is not connected and Siemens says it will be used in the future for one-megabit level integration.

NEC-Toshiba's chip has dimensions of 1.6 mils on a square, achieved by the photolithographic method, but even with this in a 16-pin dual in-line package the chip still measures around five by nine millimetres. It is compatible with existing 16K and 64K RAMs.

NTT's device uses one-micron geometry and electron beam writing. Based on a special multi-diamond polysilicon technology it is more advanced than the NEC-Toshiba device, measuring around six square millimetres.

Protective steps against alpha particle problems have been taken in the design of the Japanese devices. Alpha particles proved a hazard in the production of the 64K dynamic RAM because of the high densities.

One protective feature is the memory cell capacitance is large enough for the soft errors caused by one particle. Also, critical areas of digit lines are as small as possible and a coating is applied to the surface of the chip.

The NEC-Toshiba chip does not use redundancy because NBC has claimed it to be unnecessary. This could cause the two companies to lose the lead, if they do not get good yields.

Translating Visicalc

THE firm 32-bit microprocessor, Intel's iAPX 432, looks like appearing on the commercial market sometime this year. Initial samples are expected this quarter (CW, June 19, 1980).

Fiscal is portable and will run on IBM (System 3 and 34), Ultimac (Honeywell Level 6), Prime and CMC Reality minis. It offers stockbrokers a complete control, accounting and ledger system with facilities for accepting input from the Stock Exchange or Talisman centralised bargain accounting and Chariton settlement system.

Fiscal is portable and will run on IBM (System 3 and 34), Ultimac (Honeywell Level 6), Prime and CMC Reality minis. It offers stockbrokers a complete control, accounting and ledger system with facilities for accepting input from the Stock Exchange or Talisman centralised bargain accounting and Chariton settlement system.

Portfolio valuation is achieved using Excel input and at the end of each day's processing a tape of data for input to the Talisman system at the Stock Exchange is created.

The package gives small firms what amounts to a real time system for the daily activities of a stockbroker's office.

A number of city firms, including Northcote and Bone Fitzgerald, have signed up with CCF on a bureau basis. Northcote is expected to go in-house soon with the complete Fiscal software and hardware package.

Simon said that a complete system would be installed in a customer's office for about £90,000.

Although in its infancy the Fiscal package, which now includes an arbitrage and foreign currency dealing system, is a major challenge to Centre-file and NMW, two large online bureaux which between them account for 85% of the market in which CCF is selling its product.

Scicon acquisition

SCICON, the computer service subsidiary of oil giant BP, has announced the acquisition of the Californian consultancy Systems Control Incorporated.

Systems Control is not a quoted company and Scicon paid £10 million to the shareholders, most of whom are employees of SCI, to acquire control.

The acquisition will increase Scicon's turnover by about £25 million in the US.

Bureau losing its lead

ROLFE and Nolan looks set to lose its position as the most profitable UK bureau after a fall in the half-year profit from £76,000 last year to a current £52,000.

Shares fell back from 70p to 60p despite the fact that the Rolfe and Nolan board insisted that profit for the entire year would be at least as high as last time.

Shares were traded at an average 127p, which shows little change from the 485p price before the four-for-one split which preceded the move from the 163(2) market.

The company bought Bunzl recently. It is confident that the acquisition will add about 25% to company turnover.

PEOPLE and EVENTS

Prime appoints its first European VPs

PRIME Computer has for the first time appointed officers of the company to run major parts of its European operations. This reflects the company's recent success in Europe. Prime Europe now accounts for 40% of the company's annual turnover.

Peter Gynnes, formerly director of Prime's European marketing operations and David Cheeseman, previously director of research, development and engineering are now vice-presidents.

Gynnes joined Prime three years ago. He previously worked for IBM, IBM

Jerritts on the board

Stephen Jerritts has been elected president and chief operating officer of the company's information systems business in Minneapolis.

John Oke has joined Harris as senior sales executive for the company's information systems international division in Slough. He previously worked for Honeywell Zenith-Hermes.

Jim from Intel, where he held overseas sales appointments for the last three years. Before that he was with Motorola and SGS. He has about 18 years' experience in the European semiconductor industry.

Bob Barrett has joined Sintrem Electronics as product manager. He has worked for several major electronics companies in a marketing capacity.

He has a degree in computing and is an associate member of the Institute of Marketing.

Sara Morra and Paul Ashwell have been appointed directors of GEC. William Rees-Mogg will become a director in March.

Donald Lane and John Spivey of Informatics Inc have been given new responsibilities within the company. Lane has been promoted from vice-president to vice-president and general manager of the applications products division, replacing Spivey who becomes division vice-president at the company's Los Angeles headquar-

ters.

Laureene Barrett has joined VNG Professional Services as personnel administrator. She was formerly with Lowndes Ales Computer Services and more recently the National Bus Com-

pany.

Lois Rice has joined Control Data as senior vice-president of government affairs. She is currently vice-president of the College Board in Washington DC and is a director of Control Data. She will remain on the board.

Andy Graham has been appointed Southern area manager at Unisys Computer Company. He joins the ADP Network Services.

Keith Nichols has been appointed product marketing manager for CAD/CAM systems at Ferranti Cetec Graph-

ics.

Richard Hall has been appointed general manager of Centronics Data Computer (UK). He has been with the company nearly five years.

Brino Mills, until recently chief executive of BOC Computer Services, has been appointed a non-executive director of Abex Computer Systems.

Rufus Greenbaum has been appointed sales manager for the UK and Scandinavia at General Instrument. He

is part of a group developing a research network based

Technology consultant

A principal consultant for the Technology Management Centre has been appointed by Logica. Derek Barber took over the post at the beginning of the year, bringing with him several years' experience in communications and computer systems.

Barber joined NPL in 1954, to work on the early digital and analogue computers. He became involved in the interface between a computer and its environment and devised a standard interface which was a key tool used in the application of computers to process control.

In 1965 he became head of a group developing a research network based

AT THE CENTRE OF EUROPE'S BIGGEST & CONCENTRATED COMPUTER MARKET

COMPCE EUROPE'81

CENTRE INTERNATIONAL ROGIER
BRUSSELS, May 5-7, 1981

Europe's leading showcase for minicomputers, peripherals, terminals and microprocessors attracted nearly 6,500 trade buyers to the 1980 event. Visitors came from 15 countries worldwide with the majority consisting of directors, managers, data processing managers, systems programmers, technicians, buy engineers and consultants.

COMPUTER ENGINEERS

Sophisticated Computer Systems

Applicon United Kingdom is the successful subsidiary of one of the world leaders in computer-aided design, draughting, and manufacturing systems. To keep pace with our projected growth, we need to expand our field engineering operation and require Computer Engineers to work out of our Stockport and Hiloche offices.

Ideally, your background will include DEC PDP 11 experience and some exposure to computer graphics although full product training will be given in the UK and at our headquarters in Boston, USA.

An above average salary and conditions are available for the right man or woman. A company car is provided and assistance with relocation is available where appropriate.

Applicon's prospects for the eighties are brilliant and exciting - now is the time to join us!

Please contact Geoff Matthews, Field Engineering Manager, Applicon, Regent House, Haxton Lane, Stockport, SK4 1DA. Telephone 061-429 7227.

Applicon

THE HIGH TECHNOLOGY PEOPLE

Technical Personnel Computer Staff Executive Recruitment

White & Nunn Personnel Services Limited
10-14 Station Approach, Fleet, Hampshire GU13 8QY. Tel: 0251 3477

Somerset

COUNTY TREASURER'S DEPARTMENT

COMPUTER AUDITOR

£8481-£9411

The Council currently operates an ICL 2956 computer which will be replaced in September 1981 by an ICL 2986. A computer auditor is required following the advancement of the career of the present postholder. Applicants are required to have practical technical experience of computers including a knowledge of programming and systems analysis, must be able to communicate effectively with management at all levels and, ideally, would have an appreciation of accounting or audit disciplines.

The postholder is responsible to the Chief Internal Auditor and is expected to make a major contribution towards the efficiency and effectiveness of the Council's financial control systems including the physical and operational security of the computer installation; the appraisal and development of new systems. At least five years' post-graduate experience including its handling systems, programming in more than one language and supervising staff, is required. This appointment terminates with the current grant on May 31, 1985.

Senior Analyst/Programmer
£7,681 to £9,288 (NHS Scale 9)

This post is for someone with considerable technical knowledge and experience and the ability to lead the small team. The appointee will help to choose the new equipment and to design and implement the new system. At least two years' post-graduate experience including its handling systems, programming in more than one language and supervising staff, is required. This appointment terminates with the current grant on May 31, 1985.

Analyst/Programmer
£8,839 to £8,221 (NHS Scale 4)

This post is for someone to retrieve and analyse data from the file and help with the new system. At least two years' post-graduate experience of systems analysis and programming, preferably within a team, is required. This appointment is for two years.

Analyst/Programmer
£8,839 to £8,221 (NHS Scale 4)

This post is for someone to design and implement programs and will afford the opportunity for some experience of systems analysis and design. It is suitable for someone who has received appropriate training and wishes to develop their career by obtaining practical experience. The appointment is for two years.

Further particulars and application forms may be obtained from the District Personnel Department, Hammersmith Hospital, Du Cane Road, London, W12. Telephone 01-783 2030, extension 49. The closing date is February 2, 1981.

Closing date: January 23, 1981.

EXPERIENCED COMPUTER ENGINEERS

preferably with a knowledge of Perkin Elmer Interfacing. ADS is the sole agent in South Africa for Perkin Elmer terminals, CDC Disk Drives, Wangco, VDU terminals. ADS has 12 branches countrywide and approximately 30,000 units installed throughout the country.

We offer extremely competitive salaries and fringe benefits according to experience.

All applications should be directed to:

Mr. Horst Stegner
ANKER DATA SYSTEMS (PTY) LIMITED
P.O. Box 3138
Braamfontein, Johannesburg, South Africa

SAUDI ARABIA

We are seeking the following staff for bachelor status contracts:

Analyst Programmers

With approximately 3 years experience of IBM computers Cobol and ICL. Also be able to design programs, program maintenance and develop systems feasibility. (Ref. 65)

Operation Restart and Recovery Specialist

3 years experience in the restart of on-site production job failure and the operation of a master terminal for on-line telecommunications facility. (Ref. 52)

Preparation forming Gordon Newton on 01-322 6777 or write to Landseer-Middle East Ltd, 26 Landseer House, 26 Great Smith Street, Westminster, London SW1P 3BU.

COMPUTER MANAGER CORNWALL

You must be looking for the opportunity to succeed in managing an IBM system 34 installation, using MAPICS, QFAB, second shift planning and manufacturing industry, operating from our client's factory in million site.

To achieve this you must have:

- Comprehensive knowledge of PDP 11

- Ability to supervise a small team

- Ability to implement new systems through the various stages

An attractive relocation package and competitive salary is offered. Ring Barbara Taylor on 01-388 0034, or write to Fraser Williams, London Site, 28 Warren Street, London, W1P 8PO.

PERMANENT AND CONTRACT STAFF

MYRIAD

Outstanding opportunities exist for experienced Data Processing staff to play a significant part in the development of major international systems based on large IBM equipment. The company's European network links OSLO, STOCKHOLM, COPENHAGEN, VIENNA, MILAN, BRUSSELS, AMSTERDAM, PARIS, LONDON and currently vacancies exist in:

ZURICH & DUSSELDORF

Joining specialist project teams, the successful candidates will be involved in the system design, specification and programming of several financial and marketing based applications making use of the European network.

ANALYST/PROGRAMMERS... TO £16,000

- ★ 3 YEARS' D.P.
- ★ SOUND COBOL KNOWLEDGE
- ★ PREFERABLY IBM OS
- ★ USER LIAISON EXPERIENCE

- ★ RELOCATION ASSISTANCE
- ★ MODERN OFFICES
- ★ INTERNATIONAL SYSTEMS DEVELOPMENTS

The company is one of the world's most successful international organisations and offers a secure and progressive future to people appointed. The vacancies offer the opportunity to enjoy a high standard of living and considerable potential for personal career development.

Ref. NI/1501

EXPERIENCED RECRUITMENT CONSULTANTS

COMMUNICATIONS CONSULTANT

HARROW MIDDLESEX COMPANY CAR C. £10,000 +

Expansion and diversification have created several outstanding opportunities for additional consultants with sound computing recruitment experience to join the Myriad organisation.

These positions will appeal to people with a successful record in recruitment consultancy who now seek to advance their careers within a major recruitment organisation.

Applicants should be well educated with computing experience gained in a commercial environment. Capable of working on their own initiative, candidates will have good communicative skills and the ability to succeed in a challenging and professional environment with few constraints.

The Company offers a secure and progressive future with salary potential directly related to one's personal achievements. If you feel you are the person for whom we are looking, please telephone to arrange a confidential meeting to discuss the matter in detail.

Ref. AW/1501

The planned development of new communication systems including Data/Voice Networks, Electronic Mail and Message Switching has created the challenging post of Communications Consultant within our client's Advanced Projects Department.

Candidates will be required to demonstrate good experience of micro computing and telecommunications to enable them to review current technology, design and project manage these new developments to successful completion.

This is a senior appointment and the successful candidate will communicate with all levels of User Management up to Board level in addition to liaising closely with outside organisations including manufacturers.

Our Client is a highly successful commercial organisation and the starting salary is further supported by an attractive package of benefits.

MYRIAD APPOINTMENTS LIMITED

30 Fleet Street, London EC4Y 1AA Telephone 01-453 0981 24 hours

JBA**Manufacturing Systems Spec.****£13,000**

Only very occasionally does an opportunity arise to join a world-wide organisation and take control of the U.K. operation.

To qualify for consideration it is essential to have extensive knowledge of IBM System 34, R/TG II and MAPICS. As this is an unusually demanding role it calls for a combination of organisational and technical skills, also the ability to make decisions and deal with people at all levels.

Ambitious, self-motivated and professional people will find significant prospects, good financial rewards and travel opportunities with this international corporation.

Contact: Janet Chislers

Sales Executive**London**

We have been retained by a highly successful systems company to recruit for them an experienced Sales Executive.

Candidates will be required to sell a range of equipment which is based on software driven terminal systems which, at entry level, are plug compatible. These emulate IBM, ICL, Honeywell and Univac, but have the capacity to support a wide variety of software and hardware in the distributed processing marketplace.

It is essential that applicants have at least three years experience and can provide a proven sales record to date.

Contact: David Hendry

Banking Consultants**London Based****Up to £16,000 + Car**

A leading consultancy organisation, with a well established record in the finance and banking sectors, wish to appoint a number of specialist consultants to advise and assist clients on the design and development of new systems.

Applicants should have at least five years in depth with a substantial amount of time spent in a banking/finance environment. For the more senior positions our client expects a minimum of eight years experience. Specific background in developing foreign exchange and loans and deposits systems on IBM or DEC hardware in particular, would be advantageous.

Excellent working environment with the highest professional standards.

Contact: Jim Baker

Senior Systems Designers**London Based****Up to £15,000**

Experienced Systems Designers are required immediately by our client, a leading computer consultancy, to take a key role in the design of a large real-time communications system.

Applicants should have at least six years in the design of mainframe (preferably ICL) applications and be capable of selecting hardware/software/packages for inclusion in a system. Direct involvement with database (DBMS), graphics or communications would be an asset.

Excellent salaries according to experience. Possible assignments in B'ham.

Contact: Jim Baker

Systems Analysts – Insurance Systems**Rural Hampshire****to £9,500 + Mortg. Sub. + Bens.**

A large and expanding Insurance Company are seeking additional Systems Analysts to strengthen project teams involved in exciting design and development work.

Current configuration includes Rediffon mini and Burroughs B6800 mainframe, incorporating batch systems and on-line testing facilities.

A business systems involvement, including 2 years systems analysis and experience of COBOL, are the main qualities sought.

An excellent benefits package includes mortgage subsidy, generous relocation expenses, low interest loans, plus others.

Contact: Brian Postles

Programmers**Wembley Park****Up to £9,000**

A distributed multi-national company based in Wembley Park are currently developing an HP3000 system and so require a number of Programmers to support their teams.

Candidates should have at least 2 years experience of COBOL programming, preferably gained in an HP 3000 environment. Previous experience of Real-Time would be advantageous. Comprehensive training will be given in a number of areas. Usual large Company benefits apply.

Contact: David Hendry

Sales Support**London Based****Neg. to £8,000 + Car****(Mini Systems)**

A real chance to join an organisation which has grown in influence and whose achievements reflect the acceptance of its products in expanding multinational markets.

If your primary responsibility is to develop and implement mini-based commercial business systems and you feel that the next challenge is to move into sales support then our client, a mini-computer manufacturer, is able to offer opportunities in this area.

Analysts and Programmers with sound BASIC experience, will be considered for business support positions. A background of commercial applications is essential.

Contact: Margaret Stevens

Communications Programmers**London****£8,000**

We have been retained by an international consultancy organisation, who are expanding their development in Video/TV systems, to recruit two software programmers to be involved with this exciting application.

Applicants should have at least two years' programming experience, preferably with XDS 9270, packet message switching would be an advantage. Ability to work with users with minimal supervision is essential.

The job involves colour business graphics and networking.

**Programmers
and Operators~
We think you'll like
our latest number**

IBM 4341

We have recently installed a new IBM 4341, running under OS/VSI and VM/CMS, to replace a bureau service from our parent company.

It is therefore an opportunity to bring your IBM experience right up to date on the development and implementation of new systems projects offering exceptional challenge and interest.

We now need the following experienced men and women to join our newly formed Information Systems Department:

PROGRAMMERS

Candidates should have at least one year's PL/I experience or, alternatively, be able to offer Cobol coupled with an IBM background.

OPERATOR

Should have at least one year's experience on either VM/CMS or OS/VSI. A rotating 2-shift system will be in operation for the above two posts for which a premium is payable.

As a Member of the Allied Breweries Group of Companies, we can offer genuine career prospects, competitive salaries, and a range of valuable fringe benefits which include BUPA and a contributory pension scheme.

Please telephone or write for an application form and more information to Mrs. B. Cooper, Personnel Services Officer, Britvic Limited, Britvic House, Broomfield Road, Chelmsford, Essex CM1 1TU. Telephone Chelmsford (0245) 61871 (ext. 123).

THORBAR

A DIVISION OF INBUCON MANAGEMENT CONSULTANTS LIMITED

REF: CW/4/81
**SYSTEMS DEVELOPMENT MANAGER U.K.
 TO £14,000 + CAR + BONUS**

FOR
 INTERNATIONAL COMPANY WITH WORLDWIDE OPERATIONS
 AND A LEADER IN ITS FIELD
 OFFERS

**PLANNED MAJOR DEVELOPMENT—USING LATEST TECHNIQUES
 REAL-TIME — DATABASE
 ON-LINE PROGRAM DEVELOPMENT
 UNIQUE CAREER PROSPECTS**

You probably graduated about eight to ten years ago, certainly have programmed and acquired considerable business systems experience — covering a range of commercial applications on IBM equipment. You have been responsible for the successful completion of projects within agreed timescales and your Data Processing performance so far has demonstrated that you truly understand users' requirements and problems. In addition you possess the potential to move into a Senior Management role.

TELEPHONE US NOW (24-HOUR ANSWERING SERVICE) OR WRITE TO US IN ORDER TO ARRANGE AN IMMEDIATE INTERVIEW — EITHER IN LONDON OR THE SOUTH — AS OUR CLIENTS WISH TO MAKE THIS APPOINTMENT IN JANUARY.

D.P. Appointments & Contract Personnel,
 Greenock House, 19 Cuckfield Road, Hurstpierpoint,
 Sussex BN6 9RP. Telephone: (0273) 833848.

INBUCON

IMS Systems Programmer

Amsterdam-1 year £19,000+p.a.

Inc. benefits

We are seeking a systems programmer with one or more years IMS experience. The initial assignment is to spend one year working as a member of a 3-man team in the Netherlands. The other team members consist of a senior systems programmer and a trainee, and the specific duties to be performed include planning and maintaining I.M.S. planning for and implementing I.O.; providing advice and support to application development teams; and assisting in the evaluation of new OB/OC facilities and techniques. Our client's data centre runs MVS/SE and has a heavy IMS transaction load, with links to internal and external networks.

IMS DB Support

Netherlands-9 months+ £19,000+p.a.

Inc. benefits

We are seeking an IMS specialist with a good understanding of IMS database design, and familiarity with IMS utilities plus the technical aspects of DBA work. The initial assignment is to work for at least 9 months in the Netherlands, assisting in the implementation of IMS at a VM/VS1 4341 installation, which has several existing systems running on a non-IBM DBMS. Duties will include database design for existing and planned applications; the generation of DBD's, PSL's, etc; setting up IMS standards and procedures; and the provision of training and technical support to application development groups.

CDS is a 46-strong Anglo-Swiss consultancy specialising in providing Systems Programming, Database and Telecommunications support to European IBM users. The majority of our staff are employed by COS Ag of Zurich, but we are also prepared to enter into agreements with independent consultants.

For further details of these positions, please telephone or write to Jim Shaw at our UK offices, or call during evenings/weekends on 0890 24564.

The IBM System Software Specialists

CDS Ltd, 67-73 Park Street, Caversham, Reading RG1 3PE. Tel: 0276 28846 Telex 858082.

JBA

SAUDI ARABIA Analyst/Programmers to £19,000 + car + accom.

This established software consultancy is continuing to expand rapidly and has an urgent requirement for experienced Analyst/Programmers.

Working in the areas of on-line commercial applications, including inventory control and accounting, you must be dedicated and energetic and be capable of taking projects through from feasibility to on-site implementation.

Essential qualities are knowledge of IBM SYS 34, 3-4 years COBOL plus substantial analysis exposure.

Bachelor status is preferred but equal consideration will be given to married applicants without children. Fixe salary, plus furnished accommodation, and a company car are included in an excellent package. Initial interviews will be held in London.

Contact: Brian Postles

Designers & Programmers — Security Software

London/Bucks based

Up to £13,000

One of the leading software houses has immediate opportunities for Designers and Senior Programmers to join in team developing a sophisticated real-time system where security aspects are of prime importance.

Candidates must have been involved in the design, development and programming of security software for large mainframe and real-time applications. Experience in designing controls for access to systems, passwords and other types of checking is essential.

Contact: Jim Baker

Product Support

c. £10,500 + car

Thames Valley

Up to £13,000

Our clients are the originators and distributors of a world renowned range of Database and T.P. software products. They are currently looking for good all-round DP technicians to work in their Product Support Group.

Applicants should be well versed in business techniques, and must have a thorough understanding of commercial data processing. An IBM programming and analysis background is essential. The ability to communicate with customers will be an important requirement of the successful candidates together with obvious technical ability. A unique opportunity for small team involvement within a technically advanced environment.

Contact: Margaret Stevens

Programmers

Up to £9,000

Bucks

Our client, an expanding systems consultancy are looking for a number of programmers to design and develop specialised software for turnkey and on-line projects.

Applicants should have a minimum of one years RPG, COBOL or CORAL, or any other standard high level language.

Contact: David Hendry

Senior Systems Analyst

Up to £9,000

N.W. Kent

Our client, a successful specialist engineering and manufacturing organisation, has an opportunity for a Systems Analyst who is looking for a career step with considerable future potential.

Candidates should be graduates, or professionally qualified, with an extensive systems background in developing commercial applications, preferably in a manufacturing environment using ICL equipment.

This is a key appointment in D.P. development and applicants must have the personality, presence, leadership, intellect and capacity to deal with all levels of management and staff. Large Company benefits.

Contact: Jim Baker

Analyst/Programmers (BASIC + 2)

Up to £9,000

City

Our Client, an interesting and unusual financial organisation, is looking for experienced Programmers to join them at a time when they are installing two PDP 11/70s.

A minimum of two years experience of BASIC+ or BASIC+2 language from a financial or commercial environment, together with a knowledge of command codes and DEC hardware would be a definite advantage. The ability to understand users and their problems is essential. Good salaries and generous benefits are offered to successful candidates.

Contact: Janet Chilvers

Communications Programmers — Babbage

£8,000 - £9,000

South West of London

Continuing expansion of our client's international Videotex business has created opportunities for GEC 4000 Babbage programmers in real-time and network systems. Applicants should have at least four years programming experience and be capable of tackling packet switching, colour and business graphics. In this fast moving and exciting field. Possible overseas travel.

Contact: Jim Baker

Mini Support Analyst Programmers

£7,000 - £8,500

London

Due to steady expansion, our Client, an internationally known mini manufacturer, specialising in the marketing of banking, word processing and library circulation systems, wishes to recruit two programming professionals to join their development/support team. A minimum of two years on-line programming experience, preferably gained in a mini-environment, would be ideal, but consideration will be given to high calibre candidates with a sound on-line programming background. Training facilities and career prospects are excellent as this organisation firmly supports promotion from within.

Computer Operations Supervisor and Senior Computer Operators

The British Council works overseas in about 80 countries and is engaged in a wide variety of educational and cultural activities. Our ICL 2980 is currently being operated under contract but we are looking for a Computer Operations Supervisor and two Senior Computer Operators to work in the ICL building at Putney, where our computer is housed, on our batch processing and on-line applications which run under DME and GEORGE 2.

The Computer Operations Supervisor will have responsibility for controlling day-to-day operations and supervising Council staff in the computer room and media library. Duties will include: operating work, liaison with Council departments in central London and with ICL, responsibility for ordering supplies of computer hardware, tape and disk, liaison with maintenance department, maintaining control software, and handling stock and tick items. Applications should have a good general education and at least two years experience in computer work, including GEORGE 2, a reasonable level of proficiency in technical, administrative and the supervision of staff. Remuneration of the ICL 2980 operating under DME, plus 2½ privilege days, Non-contract pension scheme.

For further details and an application form, to be returned by 30 January 1981, telephone or write to Staff Recruitment Department,

THE BRITISH COUNCIL
 19 Saville Gardens, London SW1A 2BN. Tel: 01-930 8486 ext 2551 or 2544.

COMPUTER SYSTEMS ANALYSTS

up to £20,700 p.a. after tax

Be in at the start

ARAMCO operates in Saudi Arabia and is the largest oil producing company in the world. Despite the size of operations - offices include the largest onshore and offshore sites in the world - ARAMCO is continually seeking further ways of enhancing resources for existing offices and is still exploring, developing and expanding at a rapid rate.

In pursuit of these opportunities, one of the world's most advanced and diversified computer centres in the Middle East is being built in Qatif, the main administration centre for ARAMCO in Saudi Arabia. The centre due for completion in October 1981 and should be fully operational by January 1982. Initial contracts will involve IBM 3033 systems and one IBM 3741 system, with a further IBM 3033 system and one IBM 3741 system to follow. All of the planned systems, networks and teleprocessing systems will be large and the entire IBM system, a large RJE effort to keep ARAMCO at the forefront of computer applications in the oil industry. There will also be three of the world's first sophisticated reservoir simulators and other software in respect to well performance analysis and seismic data processing. A large database system will also be installed.

If the prospect of being in at the start appeals to you and you have a degree, or HNC, in computer science, then you should be considered in production, research and strategic areas. Technical knowledge with large IBM systems, Fortran and PL/I is required.

SYSTEMS ANALYSTS to work on the design and development of analytical system models. Physical planning and change/upgrade acts control. A minimum of 3 years experience with large computer systems, preferably IBM and specific experience with MVS/EB, MVS/SP, SNA, NJE usage is required.

SYSTEMS PROGRAMMERS experience in one or more of the following is required: MVS, JES 3, SNA, NJE. **CAPACITY PLANNERS** experience with service level monitoring on IBM 3033 with MVS and TSO is required.

New long-term contracts provide job security and career prospects to equal or better anywhere in the world. Initial contracts are single status but could qualify for married status after between one and three years. ARAMCO benefits include free residential, generous leave paid holiday and best class sports and recreation facilities. There is also an relocation cost allowance of not less than £1600 per year.

Find out more about working with ARAMCO by telephoning John Warner (0423) 89861, TODAY, or write to Dept PJ/0118. Interviews will be held in the very near future.

CoOperators

While the economy is sagging around us, we at CoOperators have expanded our services. Since 1974 we've been leaders in the contract operations field, and now we are proud to announce our new permanent recruitment division, headed by Kay Stebbings.

A few permanent career opportunities are shown below, and there are many more throughout the U.K.

A new service for 1981

If you're thinking of changing your job you should be talking to Kay, Mary or Madeleine at CoOperators. Ring 01-836 8411 or mail the Freepost coupon. TODAY.

It's contract work that you're interested in, we have a constant supply of contract assignments - at home and abroad - so make sure you're registered with us by ringing Liz or mailing the coupon.

Permanent Appointments

IBM Senior Operator £6.40.5K Mid-Surrey
Wide scope for promotion can be offered at this dynamic and expanding IBM 3031 installation. Our client's current requirement is for a competent console operator who has a sound working knowledge of OS/VSE with MVS and JES 2, coupled with the ability to act as a senior member on shift. Company benefits are excellent including relocation assistance. For further details please phone Kay. Ref: IP13/CW

IBM Operator £6.2K City A large, international, centrally-located company is offering a good salary and excellent company benefits for a good DOS/VSE or DOS/VSE operator with 18 months experience. A knowledge of CICS and BTAM would be an advantage. For more information regarding this position, where good opportunities exist for training and promotion, please contact Mary. Ref: IP5/CW

Operations Manager £10.5K package Kent coast A professional Operations manager is sought for our well-established client who has recently installed new hardware at their installation based on the Kent coast. The ideal applicant will not be less than 30 years old, have proven supervisory experience and the ability to provide good documentation. Knowledge of the insurance field would be a distinct advantage. Relocation assistance available. For further details please phone Kay. Ref: KS27/CW

Network Controllers £5K+ days NW London Responsible operators with experience of teleprocessing networks are required by a national company. Good future prospects with large company benefits are offered in return for your skills in TP Network Control, fault processing and client liaison. For further details please contact Mary. Ref: MC24/CW

Message
That same analysis applied to Surrey, would show that only 80 of 340 installations within the county are based in Croydon, leaving 260 spread around those 49 satellite towns and villages and it is this area that has remained untouched.

The reasons are logical yet changing: first, many of the 250 installations are small in comparison with city sites and agencies have tended to concentrate on major development work undertaken by large companies.

Increasingly, however, smaller companies are finding the relatively high cost of software house involvement difficult to pass through the financial mean staying away from home, ask the agency to tell us approximate costs of living and rentals.

Third, the intention is to find out and confirm the details concerning day-to-day working on site. Customers are often quite willing to modify working hours to fit in with those people who will be moving away from home during the week.

Second, fewer contractors are prepared to work in the outlying areas, preferring to commute. This is true, but with the spiralling cost of commuting, an increasing number of contractors are seeking the benefit of uncluttered, rather than rush-hour traffic.

Third, the agencies have preferred to locate themselves within the city centres - especially near the "action". Agencies are now spreading their wings, however, effectively providing their services from suburban and country bases.

What, then, does all this indicate for the experienced

CONTRACTS...

In this article Geoffrey Richardson, general manager of Computer People South, takes a personal and a business view of the South of England, and its characteristics as a market for freelance and contract staff. Richardson joined the V Group (of which Computer People South is a member) in 1976, and has risen through sales and management positions to the control of CPS.

and contract staff. Richardson joined the V Group (of which Computer People South is a member) in 1976, and has risen through sales and management positions to the control of CPS.

The South offers opportunities away from big-city blues

THE North, Midlands and London all have hubs of business and generally a common industrial theme, while the South has a more varied business structure and no single specific theme of industry.

For the purpose of this article I have defined the South of Kent, Surrey, Sussex, Hampshire, Wiltshire, Dorset, Devon and Cornwall. The computer contract professional knows that London has plenty of work, and it has been excluded for that reason.

Industry in the South is scattered far and wide. For example, Lancashire has an area of 2,276 square miles while Surrey spreads over 647 square miles - Lancashire has the two main population and industrial centers of Merseyside and Greater Manchester with Surrey focusing on Croydon.

Outside Merseyside and Greater Manchester Lancashire's installations are located in some 26 towns while in Surrey they are located in 49 towns and villages.

What confuses the picture is that Surrey has the highest traffic density in the country and the highest population rate of residents employed outside the county - mainly in London.

A further analysis of Surrey would show that only 80 of 340 installations within the county are based in Croydon, leaving 260 spread around those 49 satellite towns and villages and it is this area that has remained untouched.

The reasons are logical yet changing: first, many of the 250 installations are small in comparison with city sites and agencies have tended to concentrate on major development work undertaken by large companies.

Increasingly, however, smaller companies are finding the relatively high cost of software house involvement difficult to pass through the financial mean staying away from home, ask the agency to tell us approximate costs of living and rentals.

Third, the intention is to find out and confirm the details concerning day-to-day working on site. Customers are often quite willing to modify working hours to fit in with those people who will be moving away from home during the week.

Second, fewer contractors are prepared to work in the outlying areas, preferring to commute. This is true, but with the spiralling cost of commuting, an increasing number of contractors are seeking the benefit of uncluttered, rather than rush-hour traffic.

Third, the agencies have preferred to locate themselves within the city centres - especially near the "action". Agencies are now spreading their wings, however, effectively providing their services from suburban and country bases.

What, then, does all this indicate for the experienced

contractor and the computer professional who is contemplating contract work in the future?

Since the majority of computer installations are still in the city centres, it is not surprising that most contractors spend their time on work in these areas.

This familiarity via metropolitan work means others of work in other more remote locations are true sceptics.

The rates are no higher than those offered for city assignments, the travel distances greater and the assignment would seem to fit in with the excitement of working in a big city environment.

Contract staff seem to be the misgivings of permanent staff about a move to sticks.

Contractors who feel rural assignments is something of a retrograde step are realising flexibility, which perhaps the most important advantage of contracting.

Permanent staff need to weigh up the pros and cons such a move as they will probably be changing both social and social environment.

The short-term nature of contract assignments mean that the contractor need to consider such a move as final but can evaluate the assignment knowing that he will be free to reassess the situation after a certain period.

The reasons are logical yet changing: first, many of the 250 installations are small in comparison with city sites and agencies have tended to concentrate on major development work undertaken by large companies.

Increasingly, however, smaller companies are finding the relatively high cost of software house involvement difficult to pass through the financial mean staying away from home, ask the agency to tell us approximate costs of living and rentals.

Third, the intention is to find out and confirm the details concerning day-to-day working on site. Customers are often quite willing to modify working hours to fit in with those people who will be moving away from home during the week.

Second, fewer contractors are prepared to work in the outlying areas, preferring to commute. This is true, but with the spiralling cost of commuting, an increasing number of contractors are seeking the benefit of uncluttered, rather than rush-hour traffic.

Third, the agencies have preferred to locate themselves within the city centres - especially near the "action". Agencies are now spreading their wings, however, effectively providing their services from suburban and country bases.

What, then, does all this indicate for the experienced

contractor and the computer professional who is contemplating contract work in the future?

PLESSEY CHAIR AND HEAD OF DEPARTMENT OF COMPUTING

£13,995 - £15,432

Applicants with high academic qualifications and appropriate industrial or professional experience are invited to apply for the first appointment to this newly created Plessey Chair in Computing.

The ability to develop research and consultancy programmes in accordance with Polytechnic policy is of crucial importance. Above all the head should be able to provide academic leadership to a group of well-qualified staff who have been used to a vigorous programme of courses and curriculum development in computing and microprocessor applications.

Further details and form of application from the Assistant Director (Administration), Trent Polytechnic, Burton Street, Nottingham NG1 4BU. Application forms to be returned soon as possible.

Applications, giving full details of age, education and experience together with the names of two referees, should be sent by 31st February, 1981 to the Borough Treasurer, PO Box 4, Town Hall, Brighton BN1 1JR.

If you wish to obtain further details of the post, please ring M.R.

B. Potter, Brighton (0273) 29801 Ext 438.

TSB COMPUTER CENTRE at Crawley in Sussex

We look after the needs of 240 Trustee Savings Bank branches through a major on-line VDU network controlled from our own purpose-built Centre. We are a team of true enthusiasts dedicated to serving the increasingly sophisticated banking requirements of the TSB's millions of customers. Staff turnover is low, so there are not many opportunities to join our team.

COMMUNICATIONS CONTROLLER £6,578 - £8,646

We have recently installed a Burroughs B6800 Dual Processing System servicing an on-line network of more than 800 visual display terminals throughout the offices of the TSB South East and the Channel Islands.

A vacancy exists for an experienced Communications Controller who will be fully responsible for the efficient operation of the network. The successful applicant - who will report to the Chief Operator - will have an Assistant Communications Controller and a Technical Assistant to aid him/her in the day-to-day running of the network, together with sophisticated diagnostic and monitoring equipment.

Salary £6,578 to £8,646, dependent on experience. House Mortgages Subsidy is also payable in approved cases.

Write to: Manager, Computer Division, TSB South East - Computer Centre, Russell Way, Three Bridges, Crawley, West Sussex RH10 7LA.

Recruitment

LOGISTIX in Informatics

Microprocessor Engineers

Switzerland: Salaries to Sw.F. 62,000

Our client's software development Headquarters are situated near Zurich. We have an exclusive assignment to recruit several Software Development Engineers to join the Company's permanent staff. A Bachelor or Masters Degree in Electronics, Electrical Engineering or Computer Sciences is mandatory. All candidates must offer a minimum of four years' involvement in microprocessor software development. There is a preference for those fully familiar with Motorola 6800 hardware and software or as a secondary consideration on Intel 8086/8.

Ref. L/S/A.

Customer Support

W. Home Counties: Salary to £10K

Due to the steady expansion of its client base, a leading mini-computer manufacturer has recently opened a customer support centre to service the Western Home Counties. Consequently additional Programmers and Analyst/Programmers are urgently required to join their existing teams. At least two years' commercial programming experience combined with the ability to liaise with clients is essential as is fluency in either Cobol or Basic. Our clients have a stated preference for candidates with exposure to either DEC's PDP range or System's 5/6000 Series equipment. However, applicants with experience on any leading commercially orientated mini-computer should not be deterred from applying.

Ref. L/S/B.

Management Consultants

London: Salary to £15K

Our client, based in Central London, has an enviable reputation as one of the U.K.'s most prestigious Management Consultants. An expanding client base in S.E. England has produced vacancies for additional Consultants to join existing project teams. All candidates must be self-confident, presentable and have good personal communication skills. It is anticipated that you will be a graduate aged 28 to 34 with the ability to appreciate problems from a business, technical and political point-of-view. Particular requirements are for Information Consultants who have been involved in the selection and use of PABX equipment or who have had exposure to electronic mailing systems. Consultants with a knowledge of structured design techniques, data management or networking in a commercial data processing environment are also invited to apply.

Ref. L/S/C.

IBM Programmers

Holland: Salary to £18K

A leading multi-national with Data Centres throughout the world is seeking Applications and Systems Programmers for its IBM 3031 installation in Holland. Applications Programmers should have a minimum of 12 months' experience in COBOL or PL/I on a large IBM mainframe computer. Those who have participated in the program development of an on-line system or who have written and developed programs under IMS will be particularly welcome. Systems Programmers must have recent experience in the implementation of SYS/GENS, releases and enhancements and should be familiar with MVS, TSO, ACP/VTPM or IMS/VIS. Additional knowledge of PL/I is advantageous.

Ref. L/S/D.

Coral 66 Programmers

Sth. H. Counties: Salary to £10K

A leading Systems House and Consultancy based South of Thomas and within 40 minutes' drive of Central London and the City has requested LOGISTIX to identify and recruit several CORAL 66 Programmers. You will join a team already engaged in the design, development and implementation of a new military and defence sys-

tem. It is particularly advantageous to offer previous programming design and development experience in the areas of radar tracking and surveillance. Particular hardware experience is not important but a knowledge of PDP-11 hardware and systems software will certainly reflect in the salary offered.

Ref. L/S/E.

Oil & Seismology

Central London: Salary to £13K

A well-respected Company participating in the development of advanced oil and seismic applications is seeking additional project team members for its Central London operations. Applications Programmers, Systems Analysts and Project Leaders should offer commercial experience in a TP monitor, DBMS or distributed processing environment. Programming skills other than Fortran are required. Experience whilst Systems Analysts and Project Leaders should have been involved in

Ref. L/S/F.

Real-Time Applications

German Speaking: Salary to Dm. 70K

A well-established Systems House with a number of projects currently ongoing in the development of software both in-house and on customer sites has an urgent requirement for two additional Consultants. Team leaders and Project Leaders. All applicants should have the ability to converse in German and English. Technical experience in real-time applications is essential. A good two years' experience of Assembly, Pascal, Basic or derivative languages is a minimum requirement for all positions. Consultants for the senior vacancies will be considered for the seniorable management posts and an immediate interview of suitable candidates.

Field Service Engineers Application Engineers

up to £10,000 + profit share + 2-litre car

- * SOUTHERN ENGLAND
- * NORTH WEST
- * THE MIDLANDS
- * YORKSHIRE

FIELD SERVICE ENGINEERS up to £9,000

Working from home, the successful candidates will be involved with the installation, commissioning and on-going support activities to their respective customer base.

Candidates, with at least 2-3 years' field experience in the computer industry, should have experience of mini-computer systems and associated peripherals, ideally gained with a major manufacturer. Previous experience of CAD systems is not essential as product training will be provided at our Corporate Headquarters in the U.S.A.

Salaries will be as shown above plus profit sharing bonus, and the associated benefits package will include free BUPA and life assurance cover. Assistance will be given with relocation expenses, where appropriate.

We shall be commencing interviews in Regional Centres for these positions from 19th January 1981 so if you are interested please contact Mike Fuller, Customer Support Manager, or Bob Powell, Administration Manager, ComputerVision Limited, Penn Street Village, Amersham, Bucks. Tel: High Wycombe (0494) 714771, quoting Ref CV/12, Alternatively ring the 24 hour ASL Ansaphone Service on 01-629 1844 for an application form, quoting Ref CV/12.

These appointments are open to men and women.

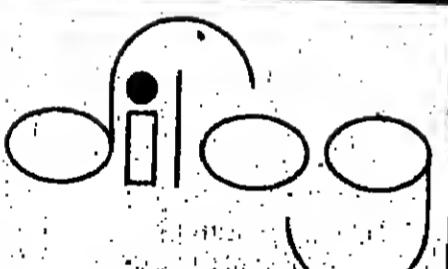

APPLICATION ENGINEERS up to £10,000

Working from a Regional Office, the successful candidates will provide some training and ongoing application support services to both new and existing customers for our CAD/CAM systems. Candidates should hold a relevant mechanical or electronic engineering qualification and preferably be familiar with the use of mini-computers. Experience of CAD/CAM, NC, PC/ES, and/or Piping/Civil Engineering would be a considerable advantage, although product familiarization will be provided.

CLIENT SUPPORT MANAGER

The Company:

Dilog provides professional services to both Clients and Contractors, with complete security to the highest ethical and technical standards.

Tech Support Manager Based in Holland

to US\$52,000

We have been retained to identify and select a European Technical Support Manager for a senior management role within our client's European marketing centre.

As a world market leader in the manufacture and supply of graphic terminals and systems, they have an enviable reputation for the quality of the products, marketing and personnel.

Reporting to the European Marketing Manager, the successful candidate will be responsible - as Manager of a group of computer professionals - for further planning and development of a European technical support organisation, as well as providing central technical consultancy at a European level.

A basic salary of up to \$52,000 US Dollars is payable with the sort of benefits and relocation package one can expect from a major organisation.

For further information contact Tony McGrath on 01-637 9611.

NORTH OF ENGLAND NORTH HOME COUNTIES

Southgate Computer Recruitment

We are a successful British manufacturer of a diverse range of computer systems addressing the scientific, technical and commercial sectors. As a progressive Company our products and support are respected; our marketing attitude is vigorous and our projected growth rate envied.

This continuing success can only be entrenched by further expanding our peripheral sales division where we are a distributor for a range of high quality tape units, printers, accessories and sub systems that have a reputation for reliability.

The Requirements

A strong sales profile and a natural desire to succeed in the highly competitive 'new business' areas is a must, as is the ability to communicate (and that means listening). You may be selling computer peripherals or other high volume products where good initial qualification and fast "closing" is the order of the day.

The Rewards

Apart from above average earnings and high base salary, the career prospects are visibly good. Full training will be given, as will every opportunity to succeed within our fast moving Company.

For an immediate and confidential interview, contact the advising consultant Simon Lever on 01-935 0671 (24 Hr. Answering Service) or 021-420 1574 (Evenings and Weekends).

For the Northern position contact Paul Pearce:

on 061-833 0427 (24 Hr. Answering Service)
or 021-308 4908 (Evenings and Weekends)

If you prefer please forward your Curriculum Vitae.

COMPUTER OPERATOR
Up to £6,477 + 14% Shift Allowance.

This appointment offers considerable scope for career advancement because our policy is to value good ideas from any member of our young, dynamic team. As a member of that team you would be based at the Computer Centre at Bridgend, Mid Glamorgan.

We are seeking an experienced Computer Operator with good

operational knowledge of ICL Operating Systems; preferably GEORGE 3, and ideally with control operation of a terminal network.

The mainframe is based upon "twin" ICL 2960 machines and associated peripherals which it is planned to "dual" during 1981. The equipment services a large terminal network throughout Wales.

Further particulars and application form are available from the Assistant Personnel Officer, Welsh Water Authority, Gloucester Way, Bedfont, Epsom, Surrey, KT20 7LP. Tel: 0876 2180.
WELSH WATER AUTHORITY AWDURDOD DWR CYMRU
 When applying please quote reference 458. Closing date 23rd January 1981.

Data Processing Operations Co-ordinator

Our client, a market leader in the production and circulation of specialist journals, and a member company of a large and diverse group, has recently reappraised the role computing plays in the support of their activities.

Reliant on the group's IBM based facility, and also utilising a Honeywell bureau, they have identified the need to recruit a Co-ordinator to assume responsibility for existing systems; assist in the co-ordination of user requirements within new systems, and also manage the in-house data preparation facility and its development.

We therefore seek a mature and stable individual with a sound background in data processing who wishes to develop a career within an expanding business environment. Additionally, the successful candidate will function in a managerial and advising capacity, as well as retaining and developing experience and responsibility in the day-to-day provision of a DP service.

You should possess a good standard of education; be able to communicate with all levels of staff; be prepared to learn about the business; and apply yourself to all aspects of the job with enthusiasm and dedication.

We see this as a unique opportunity to progress a career in DP on less conventional lines than normal, and one which will enable the individual to gain insight into the fascinating world of publishing.

To arrange initial interviews, telephone Rex Ashcroft on 01-935 0671 during working hours, or Harlow (0279) 416529 evenings and weekends.

C.A.C.I.

Analyst/Programmers London £6,000-£10,000

CACI has established a leading position in a rapidly growing application area: the creation and supply of specialised marketing data. Our customers now include many of the country's largest companies. We need analyst programmers with at least two years' experience to work on our DEC VAX 11/780 delivering projects and developing FORTRAN systems for—

- Interactive data retrieval
- Mapping
- Statistical analysis
- Large database

If you are graduate with the initiative to work with little supervision and the potential to become a project leader, CACI can offer you:

- Excellent salary
- Bonus scheme
- Rapid career development
- Stimulating working environment
- Interesting and varied applications

CACI is a highly successful international software company. We grow 50% each year and currently employ over 1,000 people in Europe and America.

Apply: Tony Bickford, CACI, 289 High Holborn, London, WC1V 7HZ. 01-405 2245.

Shift Control Leader

From £9103 to £9571 incl.

Assistance given with legal fees and removal expenses where appropriate

Applicants must have at least two-and-a-half years' computing experience including minimum of eighteen months in the Control Section of an IBM installation running under OS, OS/VS or OS/MVS. A very good working knowledge of JCL and the IBM Utilities is essential. The position is offered on a three-shift basis over five weekdays.

Conditions of service are excellent and carry all the benefits of working within local government. The organisation provides computer services for a consortium of four London Boroughs. The Computer Centre is situated in modern offices at Enfield and the current equipment comprises a 6-megabyte IBM 370/158AP and a Magnuson M80 run under OS/MVS with a teleprocessing system run under IMS/VIS.

Further details from Norman Bennett on Ext. 283.

Application forms (to be returned by 21 January 1981) can be obtained from:

Mrs. Berry Dorrington
 LOLA (London On-Line Local Authorities)
 FREEPOST, Tower Point North
 Sydney Road
 Enfield, Middlesex, EN2 8UE
 Tel: 01-366 8611 (Ext. 276)

Develop Systems Software SALARIES c.£10,000

We are a leading Computer Manufacturer with considerable growth plans for 1981/2. In order to accelerate our immediate development plans, we are seeking a number of software professionals with at least two years experience in software development and a knowledge of such languages as PL1, PASCAL, ALGOL or CORAL.

Our immediate plans call for additional self-motivated individuals to join development teams involved in a wide range of projects. We are currently researching;

Transaction Processing Language Preprocessors Data Dictionaries Network Management Systems

Each team member has access to a world-wide network of 66 computers for the development of new software ideas through their own personal interactive terminal.

Ideally, we are seeking applicants with experience of research and development work, but are equally keen to meet with systems specialists who are keen to put their own ideas into practice. You may be currently working for a software house, a computer manufacturer or indeed a larger user having its own systems support team.

As a matter of policy, we make strenuous efforts to remain in touch with the needs of the 'real' world. In consequence, our software products remain relevant to the needs of our Users and as a result are held in high regard.

Conditions of employment are excellent including free BUPA membership, a 2½% contributory pension scheme, a staff share purchase plan and a full relocation package.

Our research and development centre is situated in a very attractive location in the Northern Home Counties, surrounded by pleasant countryside and reasonably priced housing.

To find out more about these and other opportunities within our Organisation, call our Advising Consultant, IAN PAYNE, on 021-236 3781 (24-Hour Answering Service) or at home on 0827-282480 (evenings and weekends at reasonable times).

PROGRAMMERS IF YOU KNOW RPG, OR WOULD LIKE TO LEARN IT you'll be speaking our language

RPG is the language we use on our new IBM equipment, here in North Acton, for handling our management information systems which embrace production, finance and sales. To ensure and maintain high levels of efficiency we're now undertaking a programme of systems evaluation and development.

And that's where you come in. We need you to join our small, highly professional management services team and work closely with our Business Analysts.

It's an interesting time to be joining the company which is a top name in metering, measurement, instrumentation and control systems. It's also an ideal opportunity to develop your experience in a highly innovative and progressive production environment.

We'd like you to have at least 18 months' commercial systems programming experience, ideally on IBM 3,32 or 34 equipment. A knowledge of MAPICS program package would be useful and while experience of

RPG would be desirable, we can train you if necessary, so it's a good way of learning a new language.

We're looking for initiative, good communication skills, an ability to work with the minimum of supervision and some administrative experience.

The job is, of course, open to both men and women, and we are offering a salary of around £6,000 p.a. plus 23 days' holiday, subsidised staff restaurant, contributory pension scheme with free life assurance.

Write with details of your experience to Diana Palmer at Landis & Gyr Ltd., Victoria Road, North Acton, London W3 6XS. Telephone 01-992 5311, Ext. 3226.

LANDIS & GYR

precisely what good jobs should be

URGENTLY WANTED: EXPERIENCED INFORMATICS SYSTEMS SW PROGRAMMER

required: minimum 3 years of experience in compiler design and construction. Assembler and Pascal, creative and efficient practitioner. Experience in DEC PDP 11 desired but not absolutely necessary. Long-term job with top remuneration.

Apply to ALKON AG ZURICH, Fluerstrasse 83, CH - 8047 Zurich/Switzerland. Tel. (01) 54 52 54, ask for Mr. Bachmann.

Specialist Computer Recruitment Ltd

UMRCC

UNIVERSITY OF MANCHESTER
REGIONAL COMPUTER CENTRE

Director: Professor G. Black

PROGRAMMER

Salary scale: £4795 to £8095 or £5055 to £8595 p.a., depending upon age and experience to develop and support local and wide area networking systems. Real-time systems or data communications experience required. Ref. 282/80.

MACHINE ROOM CONTROLLER

Salary scale: £4795 to £8095 p.a., depending upon age and experience, required for the day-to-day running of the central computer systems and control of associated operating staff. Ref. 255/80.

ASSISTANT COMPUTER OFFICER

Salary scale: £4795 to £6985 p.a., depending upon age and experience, required to work with a section which produces the manuals describing the computer services offered to our 10,000 users. Ref. 266/80.

If you would enjoy the challenge of working in a stimulating environment with the prospects of a rewarding career which offers a good pension scheme and generous holiday entitlement, send for further information and an application form (returnable by 6th February, 1981) to the Registrar, University of Manchester, Oxford Road, Manchester M13 9PL, quoting the appropriate reference.

Some companies offer variety, excitement and involvement.

Others offer security, a realistic salary and good career progression.

TEAM LEADERS

£8,000-£9,000+car+benefits

Systems Analysis

Responsibilities will include the preparation of business proposals, systems design and implementation.

Programming

To estimate and control the programming element of projects by leading a small team of Programmers. Assisting with the solution of design problems; close liaison with the Systems Analysis Team Leaders.

Technical Support

Responsibilities include technical systems design, hardware/software evaluation and development of technical software. Will undertake special assignments of a highly technical nature.

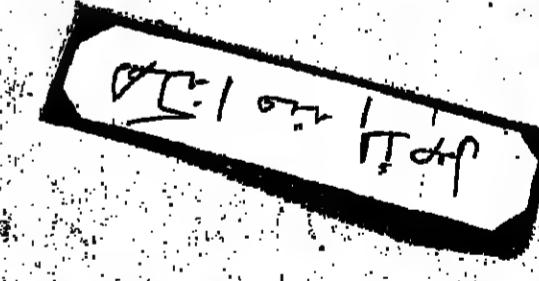

Currently there are approximately 50 projects under development including a major finance system using on-line IMS and ADF facilities, a real time vehicle control system based on DEC 11/70 equipment and a private Viewdata system for the BL Cars UK dealer network.

Candidates must have proven ability in leading small teams and will need at least 3 years' IBM, PL/I, TSO, IMS DB/DC mainframe experience or PDP 11/RSX RT/2 minicomputer experience.

Salaries in a range £8,000-£9,000 plus car, generous relocation package where necessary. All the posts are based at our new headquarters in Redditch, rural situated between Birmingham and the Cotswolds.

For full details of any of the above posts ring Sally Lenon on Redditch (0527) 84274 ext. 330 or write to Lyn Morgan, BL Systems Ltd, Grosvenor House, Prospect Hill, Redditch, Worcs. Men and women equally welcome.

One company offers both.

ANALYST/ PROGRAMMER

Braun Ireland Limited, an expanding constituent of the Gillette Company, employs in excess of 800 people in the manufacture of electronic products in the home appliance field.

The plant is located at Carton, one hour's drive from Dublin.

The company currently operates an advanced IBM/34 installation of the maximum configuration available, 22 workstations, Maples manufacturing modules, full suite of on-line accounting modules, IBM 5230 time entry system and a microprocessor-based production monitoring system.

Candidates should have several years' RPG II experience, preferably on IBM/34. Knowledge of Maples manufacturing modules would be a distinct advantage.

Salary will not be a limiting factor.

An attractive fringe benefit package and relocation allowances, if applicable, will be provided.

Candidates should send comprehensive personal, career and salary details to:

The Personnel Manager
BRAUN IRELAND LIMITED
Dublin 11
Ireland

Interviews of short notice should be arranged on or before January 30, 1981.

In reply please quote Ref. No. 07181.

Senior Sales Engineer PROCESS CONTROL

c. £18,000 per annum
(open ended)
NEGOTIABLE GUARANTEE
plus Company Car

We are a successful leading manufacturer of automatic computer systems for the control of process plant in batch, continuous, or distributed control modes. Our total capability of in-house design, manufacture, software and support provides complete control of industrial processes of all types by utilising a modular system philosophy backed up by a nationwide team of engineers.

Our planned expansion has created an opportunity for a sales professional with a strong process control bias. Candidates must be fully conversant with P.C. applications, that will typically involve bulk products.

It is essential that you have the ability to influence people by creating confidence and be happy at all negotiation levels through to the board room, without losing sight of the main objective; to sell the system. Your professionalism, dedication and success will be rewarded by our excellent earnings package together with genuine career opportunities. The Company attach great importance to their further penetration of the process control market and envisage a high growth rate in this area.

For an immediate and confidential interview, contact our advising consultant, Paul Paearon on 021-236 3781 (24 hour answering service) or 021-308 4908 (evenings and weekends)

MINI COMPUTER ENGINEERS

South Yorkshire · to £12K+Car

A number of experienced, enthusiastic engineers are required by our client to install and maintain their sophisticated computer systems in this region.

These positions are particularly interesting as they involve both the "Total System" and "Component Level" approaches to fault location, utilising Software and Hardware techniques.

Full product training will be given but candidates will be expected to have CPU, disc, tape, printer and component level experience. A Degree or HNC and a positive attitude are also essential qualifications.

Successful applicants can look forward to extending their knowledge in an interesting and rewarding role with a respected and progressive company.

Relocation allowances are available if required.

Contact Peter Gorton or Howard Wynne regarding this position on 01-637 9611.

Suite 201/6 Albany House
324 Regent Street, London W1

MANAGEMENT & EXECUTIVE SELECTION

ANALYST/PROGRAMMER

SALES & MARKETING RECRUITERS LTD
1000 HIGH STREET, BRUNELLS, BIRMINGHAM B12 8QH

THE SALES BIT

The high cost of failing to recruit sales personnel

THIS is the time of year when many sales managers, armed with their nice new shiny budgets, start to worry about the recruitment they should have completed in the final quarter of last year, but were too busy closing last minute business in order to meet their annual targets.

It is now, with a whole selling year ahead and the sales performance pressure taken off for a few weeks, that they have time to think about the implications of having an incomplete sales team and a sales target that does not take manpower shortages into account.

It is at this point in the proceedings that the learning curve between the arrival of a new recruit and the likely achievement of his first sales success is seen in its true and extended light. Now is when many sales managers begin to realise the importance of giving the right priority to sales recruitment at the right time, and handling the actual recruitment process efficiently.

Last September Sales and Marketing Recruiters carried out a recruitment assignment for a major computer company. The advertising campaign was successful and after the preliminary interviews had been completed we had a short-list of 15 appropriate candidates.

Effective sales recruitment is one of the most important elements of the sales manager's role. One only has to consider the lost profits related to untrained revenue because of unmanned sales territories to realise how costly the failure to recruit can be.

In my experience the principal reasons for this kind of problem are lack of priority to recruitment as a management function, and insufficient urgency in completing the selection process once it has begun.

Next week I would like to discuss some of the factors that must be taken into account to achieve a reasonable level of success in recruiting sales personnel.

TRADER

CONFERENCES

Software engineering

SOFTWARE engineering "tools" will be demonstrated at the fifth International Conference on Software Engineering, to be held at the Town and County Hall, San Diego, California. Demonstrations by commercial, academic and government tool builders are expected during the event which is sponsored by the IEEE Computer Society, the National Bureau of Standards and the Association for Computing Machinery Special Interest Group on Software. The conference will take place between March 9-12. For further information contact Ray Houghton, National Bureau of Standards, Technology Building, Room A265, Washington, DC 20585.

The better candidates were gone, and those that remained had lost considerable confidence in the company, or at least in management. Not surprisingly the eventual outcome of the exercise was a total failure to recruit even

more candidates. Moreover, as "campus generated" candidates are the exclusive confine of the client

Puzzle Answer
19 = 6381/57429 is the only possibility if the 8 and 1 are to lie together.

Ferranti Computer Systems Ltd.

Field Sales

PT7 Programmable Terminals are Advanced Alternatives to ICL 7502 and IBM 3270.

PT7 Programmable Terminals offer valuable additional facilities for the data processing manager and the terminal user alike.

PT7 Programmable Terminals offer the financial controller better price/performance ratios.

PT7 Programmable Terminals are already well established and, with several new product releases recently announced, are set to penetrate still further the terminal systems market.

PT7 Programmable Terminals selling at customer level is backed by a major advertising and exhibition campaign.

Ferranti Computer Systems is recruiting experienced Sales Personnel to cover the South of England, and persons with relevant experience in selling interactive terminals for connection to ICL and IBM computers are invited to apply for these rewarding positions.

Successful applicants will be paid an attractive salary, a company car is provided, there is a bonus scheme and the usual fringe benefits of a progressive company.

Apply in writing to Mark Freeman, Ferranti Computer Systems Ltd, Simonsway, Wythenshawe, Manchester M22 5LA, quoting reference 80/AD/15/CW or telephone 061-499 3355 Extension 225 or after working hours 061-485 2540.

SOUTH YORKSHIRE POLICE (ARMED)

WANTED FOR INTERVIEW

SENIOR SYSTEMS ANALYST

Ref: 1912/15/80 to 1912/20/80

South Yorkshire Police seek a suitable qualified Systems Analyst to work with police officers engaged on the development and implementation of computer systems. The post involves the planning and direction of systems analysis and systems design, and the preparation of detailed plans for the implementation of new information systems. It requires experience of working with police-operated systems, a current interest in the implementation of new information systems, and a good knowledge of the South Yorkshire Police Force.

For further information contact the South Yorkshire Police Force, 106 Marlborough Road, London NW1 6LY. Telephone: 01-580 2222, extension 3334. Closing date: January 20th, 1981.

The person selected will have programme interests, preferably with microprocessor and data base management systems, and experience of working with Data General machines will be an advantage.

Moreover, as "campus generated" candidates are the exclusive confine of the client

Puzzle Answer
19 = 6381/57429 is the only possibility if the 8 and 1 are to lie together.

Systems, Database, and Programming Staff required by Britain's leading property company. (Salaries £7,000-£12,500 plus substantial benefits)

Land Securities (Management) Limited, the leading property company, is in the process of developing a range of new computer systems. These will be based on a recently installed Honeywell Level 64, will utilise TDS and DSIS software and will incorporate a network of terminals both in the Head Office and Regional Offices.

The development team is about to be expanded, and applications for the following vacancies are invited from men or women who preferably have had experience of working with a Honeywell Level 64 or 66 computer in an on-line environment. However, applications will be considered from those with experience of the use of any mainframe teleprocessing monitor and/or Codasyl database management system. The possession of a degree or appropriate professional qualification would be an advantage.

SENIOR ANALYSTS experienced in the identification of user requirements at the business level and the translation of such requirements into computer systems specifications. Experience of property and/or financial systems would be an advantage.

A CHIEF PROGRAMMER to manage a team of around 15 programmers. Candidates must have had experience of leading a team of programmers working on the development of on-line systems.

A DATABASE SPECIALIST experienced in data analysis, database design techniques, the use of a data dictionary and the control of a database used to support on-line systems.

ANALYST PROGRAMMERS AND PROGRAMMERS with upwards of two years' experience of the specification and/or programming of computer systems.

Starting salaries between £7,000 and £12,500 are envisaged. Other benefits include a non-contributory pension scheme, annual bonus, a share participation scheme and free BUPA and restaurant facilities.

Please apply with brief details of qualifications and experience to:

Management Services Manager,
Land Securities (Management) Limited,
Landsec House, 21 New Fetter Lane, LONDON EC4P 4PY.

Programmer/Analyst

Burmah-Castrol worldwide

In this new vacancy, existing within our Finance Co-ordination area, you would be working with a small group of people responsible for the collection and processing of financial data from our worldwide organisation.

You would be responsible for providing support for an on-line system (APL based) and could expect to play an active part in further system developments. Although the system is essentially geared towards financial reporting, future requirements will be of increasingly wider scope and will be coupled with ad-hoc projects of a non-routine nature.

We are looking for someone who is likely to be a graduate with two or three years' experience as a programmer or programmer/analyst. In addition to technical ability, you will also need good communication skills and want to make a positive contribution. This is an opportunity to develop your skills in a management information environment.

An attractive salary will be accompanied by a comprehensive benefits package including non-contributory pension and life assurance scheme and relocation assistance where necessary.

Please ring, or write for an application form to David Freeson, Recruitment Manager, Burmeh House, Pilbers Way, Swindon, Wiltshire SN3 1RE. Telephone: 0793 47400.

COMPUTER SHIFT LEADER

RAIR require a Computer Shift Leader to be responsible for software implementation and customer support for their advanced microcomputer range. Applicants should have sound knowledge of hardware and software in general and microcomputer software in particular. Application forms and further details from RAIR Limited, 30-32 Neal Street, London WC2H 9PS. Telephone 01-838 4863.

SOFTWARE MANAGER UP TO £10,000

RAIR require a Software Manager to be responsible for software implementation and customer support for their advanced microcomputer range. Applicants should have sound knowledge of hardware and software in general and microcomputer software in particular. Application forms and further details from RAIR Limited, 30-32 Neal Street, London WC2H 9PS. Telephone 01-838 4863.

RAIR currently operate an ICL 18027 computer running VMS/VMS2, due for delivery in 1981 as a minimum.

The successful applicant will be expected to play a substantial role in the transition from the present system to the new operating system if required.

Applicants must have at least two years operating experience on a complex scientific high level of responsibility during the intervening period.

Applications to be made from the Chief Executive Officer, RAIR Limited, Weston Woods, Weston Woods, 44991, ext. 43. Closing date: Friday 25 January 1981.
